What is BudgetBuddy?

Budget buddy is a CLI-based expense tracking system in C

Helps users record and manage daily spending

Stores data in a structured CSV format

Simple, lightweight, and easy to use

Why this project?

Encourages financial awareness

Bridges C programming with basic data handling

Problem Statement

Existing Problem:

People often forget their daily expenses
No simple tool for beginners to track spending
Manual tracking is time-consuming and error-prone

Our Solution:

A digital, menu-driven expense tracker in C
Automatic storage and summary generation

OUR SOLUTION

TEAM CONTRIBUTION

- Pratham :Core Program & Menu
- Swarit : Expense Categorization ,UI & Workflow
- Krish : File Handling & CSV Export
- Sujal : Monthly Summary & Calculations
- Manas : Testing and Documentation

1

Add daily expenses

2

Categorize expenses (Food, Travel, Shopping, Bills, Others)

3

View all stored expenses

4

Export data in CSV format

5

Generate monthly
summary

FEATURES OF THE PROJECT

PROJECT SHOWCASE

Recent Expenses				+ Add Expense
Date	Category	Description	Amount	
1 Feb	Food	Groceries from supermarket	₹2,500	
2 Feb	Travel	Bus pass monthly	₹1,200	
3 Feb	Shopping	New headphones	₹3,500	
5 Feb	Food	Dinner with friends	₹800	
7 Feb	Others	Gym membership	₹1,500	
8 Feb	Food	Coffee & snacks	₹350	
10 Feb	Travel	Cab to airport	₹900	
11 Feb	Shopping	Books for semester	₹1,800

printf("1. Food\n2. Travel\n3. Books\n4. Entertainment\n5. Other\n");  
int choice;  
scanf("%d", &choice);  
  
switch(choice) {  
    case 1: strcpy(e.category, "Food"); break;  
    case 2: strcpy(e.category, "Travel"); break;  
    case 3: strcpy(e.category, "Books"); break;  
    case 4: strcpy(e.category, "Entertainment"); break;  
    case 5: strcpy(e.category, "Other"); break;  
    default: strcpy(e.category, "Other");
```

SYSTEM WORKFLOW

OBJECTIVES

Our main objectives are:

- To create a user-friendly CLI-based system

- To categorize expenses using switch-case

- To store data in a CSV file

- To provide monthly expense summary

- To make data usable for future analysis

FIXED V/S VARIABLE

IF VARIABLE EXPENSE IS MORE THAN 40 %, lifestyle can be optimised

Spending (treemap)

Hostel / PG Rent	6000
Transportation	700
Mobile & Internet	500
Entertainment	1500
Personal Expenses	2000
Miscellaneous	1000

Total spending

TECHNOLOGY USED

Programming Language:

- C Language

Interface Type:

- Command Line Interface (CLI)

Concepts Used:

- Structures
- File Handling (CSV)
- Switch-case
- Loops

OUTPUT & RESULTS

Expected Outputs:

Stored expenses in expenses.csv

Monthly total expense

Category-wise spending

Highest spending category

Example Output:

- Total Expense: ₹4500
- Average per day: ₹150
- Highest Spending: Food

CONCLUSION & FUTURE SCOPE

Future Enhancements

- Add graphical interface (GUI)
- Monthly reports in charts
- Password protection
- Cloud storage of data

Conclusion

Budgetbuddy is a simple yet powerful expense tracker
Helps users manage money efficiently
